Government Loans & Zero-Capital Lead Execution Blueprint

Internal Executive Roadmap (Scenario B): How Ariel Renewable Energy Limited funds corporate scaling and executes multi-megawatt C&I rooftop leads without upfront Phase 1 working capital (Tk 1.5–2.5 Cr) or Phase 2 inventory capital (Tk 5.0–8.0 Cr).

1. DIRECT GOVERNMENT LOANS & INSTITUTIONAL FUNDING CHANNELS FOR ARIEL

Government Funding Channel	Capital Unlocked & Terms	Qualification Architecture, Deployment & Leverage Math
Channel 1: Tk 500 Cr Startup Fund & BB 4% Startup Refinancing *(Startup Bangladesh + Bank Startup Desks)*	**Tk 1.0 Crore to Tk 5.0 Crore** Equity / Quasi-Equity + **4.0% Fixed-Interest Debt** *(Collateral-Free / Low-Collateral)*	**Mandatory Positioning:** Apply via dual-engine architecture—**Ariel Renewable Energy Ltd** (EPC arm) + **Ariel-SaaS™** (*"AI/IoT-Enabled C&I Energy Management & SaaS/ESCO Platform"* automating BESS load-dispatch & I-REC CBAM carbon tracking). Commercial banks must allocate **1% of net operating profit** to startups at 4%. **Tk 3 Cr Deployment: 40%** Working Capital & 10%–20% LC Margin Deposits; **35%** Rolling BoS/6063-T6 Rail Inventory; **25%** Smart IoT/EMS & I-REC Platform.
Channel 2: IDCOL & Tk 1,500 Cr Green Fund via "Margin-as-Equity" Secret ***(For Zero-CapEx PPA SPVs)***	**75%–80% Non-Recourse SPV Debt 4.0%–6.0% p.a. | 10-Yr Tenure Tk 0 Out-of-Pocket Cash**	**The Leverage Secret (500 kWp Benchmark): Turnkey price = Tk 2.58 Cr; actual base COGS (hardware + structure + subcontract labor) = Tk 2.10 Cr; built-in EPC gross margin = Tk 48 Lakh (~18.6%–20%). When forming a 15–20 yr PPA SPV, Ariel's ~20% EPC margin serves directly as the required 20% SPV equity! The 80% IDCOL/SFD green loan (~Tk 2.06 Cr) funds nearly 100% of hard costs, repaid via a locked client Escrow Account (+10-yr corporate tax holiday: 100% Yrs 1–5, 50% Yrs 6–10).**

2. THREE-STEP IMMEDIATE LEAD EXECUTION SEQUENCE (OUT-OF-POCKET COST: TK 0)

Execution Phase	Who Funds / Executes?	Step-by-Step Operational & Financial Mechanics
Step 1: Free Engineering & Bespoke Roof Dossier	**SREDA Grade-A Subcontractor** *(Cost to Ariel: Tk 0)*	Lock in **2 SREDA-enlisted Grade-A subcontractors** (Dhaka/Gazipur/Savar @ Tk 3,200/kWp & Chattogram/CEPZ/Narayanganj @ Tk 3,400/kWp + Tk 45,000 utility fee) under the **Zero-Risk White-Label MoU**. Partner uses their engineers, PVsyst/HelioScope, and RTK drones to build the **4-Page Bespoke Roof Dossier** and conduct physical audits at zero upfront cost in exchange for the installation subcontract.
Step 2: Hardware Import via Client ERQ Account	**Client USD ERQ Account** *($0 LC Limit from Ariel)*	Offer export factory clients a **2%–3% hardware discount** to open the USD import LC directly in their factory's name via their **Export Retention Quota (ERQ)** account under SRO 159-Law/2026 (0%–1% duty on `8541.43.00` panels, `8504.40.90` inverters, `8507.60.00` LFP BESS). Eliminates 100% of Ariel's LC limit and forex risk.

Execution Phase	Who Funds / Executes?	Step-by-Step Operational & Financial Mechanics
Step 3: Local BoS & Labor via 30% Client Advance	**Client 30% BDT Advance or Bank SFD Loan**	Sign separate BDT Master Turnkey Contract enforcing strict milestones: **30% Advance on signing** (**Tk 77.4 Lakh** on 500 kWp), **50% Local LC at Sight**, **15% on Completion**, **5% on NEM COD**. Pay subcontractor's **20% mobilization (~Tk 3.5 Lakh)** and buy local 6063-T6 aluminum rails from the 30% advance (or direct Bank SFD 75%–80% loan disbursements), locking in **Tk 45–52 Lakh gross margin**.

3. MANDATORY CORPORATE COMPLIANCES & CONTRACTUAL MARGIN SAFEGUARDS

Corporate, Banking & Customs Compliances	Contractual Cashflow & Subcontractor Safeguards
1. Corporate & Trade License Scope: Incorporate **Ariel Renewable Energy Ltd** + **Ariel-SaaS™**. Trade License must list: *Renewable Energy Services, Solar EPC Contracting, Electrical Engineering Consulting, Hardware Import* + TIN, 13-digit BIN & **SREDA Digital Vendor Profile**.	**1. Bank Performance Guarantee (PG) vs. Retention Trap:** Never allow clients to hold a 10% cash retention for 12 months (traps 50% of profit). Contractually substitute cash retention with a **Bank PG** upon Net-Metering COD to collect 100% cash immediately.
2. Mandatory SREDA Grade-A Sign-Off: Utility Net-Metering & the Tk 10.50/kWh tariff require all SLDs and commissioning reports to be signed by a **SREDA-enlisted EPC firm** (executed via Ariel's 2 contracted Grade-A partners + OCEI Class A/B/C supervisor).	**2. White-Label & Non-Circumvention Shield:** Subcontractor crew must wear **Ariel Renewable Energy branded PPE vests/helmets** on site. Enforce a strict **Tk 50 Lakh penalty** against direct client solicitation or third-party business cards.
3. Dual-Currency Account, SFD Tie-Ups & H.S. Rules: Open BDT/USD ERQ-facilitation bank account; partner with SFD heads at **BRAC, EBL, City Bank, Bank Asia & IDCOL**. Never import aluminum rails (7610.90.00 taxed at **58.6%**); source 100% locally (Kai, Altech, PHP).	**3. PR-Gated Payouts & USD FX Peg:** Pay subcontractor **20%** mobilization, **40%** mounting, **25%** termination, and hold **15% for 60 days post-COD** contingent on verified **Performance Ratio (PR) ≥ 80%** & zero roof leaks. Peg BDT quotes to BC Selling Rate (**±1.5%** band).

IMMEDIATE 14-DAY EXECUTION PROTOCOL (COST: TK 0): (1) Execute White-Label MoUs with 2 SREDA Grade-A subcontractors; (2) Shortlist 10 warm RMG/textile factories (roof ≥ 7,000 m^2, sanctioned load ≥ 715 kW) and have partner engineers generate free 4-page HelioScope/PVsyst Satellite Dossiers; (3) Pitch MDs/CFOs using the **Feb 28, 2027 (Tk 10.50/kWh)** cutoff and connect signed LOIs to Bank SFD / IDCOL desks.

Approved: Syed Akramul Hassan, MD & CEO
